DETAILED ACTION

1. Newly submitted claims 24-53 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: original claims 1-23 previously examined, now cancelled, were directed to a system for controlling a safety system of a vehicle comprising multiple controllers and an arbitration module (claims 1-16) and multiple controllers which are operated based on angular vehicle position (claims 17-21) and multiple controllers which operate in non-divergent and divergent dynamic regions (claims 22-23). Newly added claims 24-53 are directed to controlling a safety system of a vehicle which includes determining a final control pressure based on a first control pressure determined in response to roll rate and a second control pressure determined in response to roll angle (claims 24-34) and controlling a safety system of a vehicle which includes determining a proportional pressure, a derivative pressure and a final control pressure in response to the proportional and derivative control pressure (claims 35-53).

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 24-53 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

2. Currently there are no pending claims directed to the originally prosecuted invention (i.e., claims 1-23). If applicant wishes to pursue the invention defined by claims 24-53, applicant is urged to file a Divisional application.
